14. Professional Behavior 14

Appendix: Excerpts from BHCC Student Handbook 15

1. Instructor's Name: Peter Morgan

2. Course Title / Number: *Java Programming* / CSC-239-02

Class Meetings: Mon, Wed: 9:00 a.m. – 10:40 a.m., 9/3/2025 – 12/15/2025.

Remote Access to Class Meetings: https://bhcc.webex.com/meet/pmorgan

Office Hours: After class or by appointment.
(Use the same URL that we use for class meetings:
https://bhcc.webex.com/meet/pmorgan)

Contact Information (E-Mail): pmorgan@bhcc.edu

3. General Course Description (according to the College catalog)

In this course, students who already have been exposed to programming and Object Oriented thinking, develop the ability to correctly analyze a variety of problems and generate appropriate algorithmic solutions using the Java Programming Language. The course emphasizes the principles of top-down structured design and Object Oriented thinking. Topics include but are not limited to branching and looping mechanisms; arrays, functions and function overloading, arguments by reference and by value as well as optional arguments; recursion; creating packages, structures and classes, constructors and other methods, file I/O; inheritance and polymorphism. Strong analytical skills are recommended for students enrolling in this course, plus familiarity and experience working with the Internet and basic HTML tags. The course covers creating both Java Applications and Java Applets including event handling, animation, and audio.

Prerequisites

Writing Skills II (ENG095),
College Algebra-STEM (MAT194) and
Introduction to Computer Science & Object Oriented Programming (CSC120) with grade C or better or equivalent experience with permission of the department chairperson. All prerequisites must be completed with a C or better.

4. Required Course Materials

Required Materials

1. **Personal Computer** You will need a working Personal Computer with a Browser for connecting to the BHCC "**Grader Than**" environment.
2. **A Working Microphone (connected to your PC):** Students are required to have a **microphone** on their PC, so that they can participate easily in class discussions. This is important because using the *Webex* "chat" feature is less effective than speaking into a microphone, as a means of participating in the class. If a student does not have a microphone, they may wish to consider getting an inexpensive set of headphones or "ear buds" with a microphone. Using headphones or "ear buds" with

a microphone is preferable to using speakers and a microphone, because it is less likely to produce echoes that result from audio feedback.

3. **Backup Storage** It is important to have some form of "backup storage" of your files, in case your computer stops working. This could be a **flash drive** or **external hard drive**. It could also be an account with *Google Drive* or *One Drive*.
4. **Internet Connection** You will need a working internet connection in order to participate in the class meetings and access class materials.
5. **User ID** You will need your **BHCC user ID**:
   - Day-to-day communications about the course will use BHCC E-Mail.
   - Class materials will be distributed using the *Moodle* Learning Management System.
   - Quizzes and Programming assignments will be submitted using *Moodle*.

Recommended Textbook (optional)

- **Textbook:** Y. Daniel Liang. ***Introduction to JAVA Programming and Data Structures. 12th edition***. Boston: Pearson Education, Inc. publishing as Prentice Hall, Copyright 2020. Students can obtain the book from various sources on the Internet, in addition to the College bookstore. (Shop around and find the best option for **you**.).
- We will **not** be using the *MyLab Programming* components of the publisher's web site.

You do **not** need a version of the book "with Pearson eText Access Card". For example, if you buy a used copy of the book, and the single-use "scratch-off" Access Code has already been used, you do **not** need to purchase a separate Access Code.
The publisher **may** offer a "Student Value Edition" (loose-leaf) on their website that does **not** include access to the Publisher's website. That will be OK for this course, but if you go on to take *Data Structures* and/or *Advanced Java*, you may need website access for one or both of those courses.

- If you have the 11th edition, that is OK (although the page numbers in your copy will be slightly different from the page numbers in this syllabus).
- If you have an electronic copy of the book (for example, a PDF file), that is OK.

The ISBN number specified for our textbook (on the BHCC Bookstore website) is: 9780136520238. However, ISBN numbers are different for different physical configurations of the book. For example, a paperback copy of the book, a loose-leaf copy of the book, and an electronic copy (PDF file) will each have a different ISBN number.

Student Link for online access to the textbook:

(Choose the "**eTextbook**" option. Do **NOT** choose the "Exam Prep" option.).

https://www.pearson.com/en-us/subject-catalog/p/introduction-to-java-programming-and-datastructures/P200000003470/9780137554768?utm_source=copystudentlink&utm_medium=referral&utm_campaign=XXLEGP0423PCOM

5. Course Topics

Details regarding the planned topics of each class meeting are in section 10, "**Tentative Class Schedule"**.

6. Teaching Procedures

Through exposure to lectures, demonstrations, hands-on activities, individual projects and examinations, students will learn to develop solid algorithms and implement these algorithms using one of the most powerful and sophisticated computer languages. The successful student will emerge from this course ready to proceed into specialized courses such as Data Structures with the necessary degree of literacy.

REMOTE and SYNCHRONOUS class format

This is a REMOTE, SYNCHRONOUS course. In remote courses, we do not meet on campus in a classroom. Instead, in this class we use a tool called *WebEx Meetings* where we can come together in a virtual classroom in order to explore our subject matter in a digital setting.

We will also use assignments distributed on the *Moodle* Learning Management System.

Because the course is taught in a REMOTE, SYNCHRONOUS format, students are required to attend the live classes as they occur. Students are encouraged to ask questions during the class. Students attend the classes using the *Webex Meetings* application on a personal computer connected to the Internet. If a student attends the class using their "smart phone", that should be a **rare** occurrence due to some technical difficulty with their Internet access. The reason for this policy is that students will need to demonstrate their solutions for Lab / Homework exercises during class, and that cannot be done using a smart phone.

Students are *forbidden* from attending class while they are "at their job", or while they are performing any other task. While attending class, a student's undivided attention should be dedicated to the class. Even if a student's manager "gives permission" for a student to attend a remote class during working hours, there will inevitably be distractions, and these will detract from the experience of attending the class.

Accessing Course Materials on *Moodle*

Course materials for the class are available to students on the *Moodle* learning management system:

Using your browser, open the following web-page: https://online.bhcc.edu/ Login using your **BHCC** user ID and password. In the "**Course Overview**" section, click on the icon for your assigned section of the course: **2025FA JAVA Programming (CSC-239-02)**

Lecture Recordings

The instructor may record part or all of a class session. When practical, the instructor will provide a link (on *Moodle*) to the recording when it is available. (*Webex* recordings are usually available within one day of the recorded meeting.) Students may **NOT** share any

portion of the recording with anyone. Students are **NOT** permitted to make their own recording of the class.

Lab Exercises (Homework)

Do **NOT** collaborate with other students on Lab Exercises. If you need help understanding the requirements of the assignment, ask the instructor, either during class or privately.

- Students work on lab exercises during class, but may finish them at home if they run out of time.
- Students are required to **submit** the source code for their solutions for Lab Exercises to *Moodle*, **AND** they are also required to **demonstrate** those solutions **during** class.

This policy bears repeating: If you do not **submit** the source code to *Moodle*, AND **demonstrate** the working program during class, then you do not get credit for the **Lab Exercise** assignment.

- Students should submit the source code for their Lab solution to *Moodle* as soon as **they** feel it is working correctly.
- The "due date" of a Lab Exercise refers to the **submit** date, not the date of demonstration during class.
- Students must demonstrate their Lab solution within two weeks of the **submit** date. That is, do not wait until almost the end of the course to demonstrate your Lab solutions. An *additional* late penalty will be imposed for non-compliance with this requirement.

The instructor maintains a record of whether each student has ***successfully*** demonstrated the solution to each Lab Exercise. This data becomes a significant part of the student's final course grade.

Programming Projects

Students work on Programming Projects outside of class. Students are required to **submit** the source code (**.java**) files for their solutions for Programming Projects to *Moodle.* Do **NOT** collaborate with other students on Programming Projects. If you need help understanding the requirements of the project, ask the instructor, either during class or privately.

Submitting work to *Moodle*

When a student submits their solution for a **Lab Exercise** or a **Programming Project** to *Moodle*, they must complete the procedure for submitting an assignment. That is, the final *Moodle* **Submission Status** for the assignment must be "**Submitted for grading**". There is a document under the "**Handouts**" topic (on *Moodle*) that contains detailed steps for submitting an assignment to *Moodle*.

E-mail Convention

We all receive many e-mail messages every day. To assist each other identifying e-mail messages related to the course, please follow this convention: whenever sending an e-mail message to the instructor regarding the course, include the course number and section at the beginning of the e-mail **Subject** field.

For example, the **Subject** field of an e-mail message asking for clarification of a course assignment might look like the following:

CSC-239-02: Question about Project 2

7. Student Learning Outcomes

STUDENT LEARNING OUTCOMES: Upon completion of this course students should know and feel comfortable using the following material, concepts, and techniques:

- Variables and Assignment statements
- Local variables
- Data types and expressions
- Simple flow control
- Logical expressions
- Multiway branches
- Designing loops, for loops and while loops
- Program style
- Object-Oriented design
- Programmer defined functions
- TextBoxes
- Command buttons
- Option buttons
- Drawing objects
- Basic animation
- Colors
- Function/method overloading
- Testing and debugging techniques
- Arrays
- Input and Output
- Streams and File I/O
- Character I/O
- Structures, classes, and abstract data types
- Recursive functions and recursive thinking

8. Basis for Student Grading

Students are graded on the basis of correctness of concepts as evidenced by oral participation in class, completion of class preparation assignments and lab assignments, as well as the degree of success achieved in programming projects and examinations, in the following manner:

Attendance and Participation	10%
Quizes	30%
Lab Exercises	30%
Programming Projects	30%
Total	**100%**

Note: any grades that are recorded on ***Moodle*** are for individual assignments only. Overall course grades are calculated outside of ***Moodle***. Any "Course Total" number that you may see on ***Moodle*** can not be trusted.

9. Procedure (criteria) for Evaluating Student Performance

Quizzes

- Quizzes will be online *Moodle* quizzes.
- Quizzes will be announced ahead of time, including which lectures and chapters will be covered by the quiz.
- Quizzes are "open book", meaning it is permitted to look up an answer to a question if necessary.
- Students will be given a time period of several days during which they must complete the quiz and **submit** their answers. Once a student begins the quiz, then there is a two-hour time limit for completing the quiz. A student is allowed **one** attempt at completing a quiz.

Lab Exercises

Students are required to **SUBMIT** the source code of their solutions for Lab Exercises to *Moodle*, **AND** students are required to **demonstrate** the solution during class. This practice of **demonstrating** lab solutions during class provides an opportunity for class discussion, and becomes a significant portion of each student's class participation.

The student should **submit** the source code to *Moodle* when they believe it is ready, and demonstrate the solution at the first opportunity during class.

- If a student never completely SUBMITS the assignment to *Moodle* (that is, they leave the *Moodle* status as "**Draft (not submitted)**", then the assignment will receive a grade of ZERO. (The *Moodle* Submission status must be "**Submitted for grading**" in order for the student to receive credit for the assignment.)
- If a student SUBMITS a Lab solution to *Moodle,* but never **demonstrates** the solution, then the assignment will receive a grade of **1** (out of 100).
- Students must demonstrate their **Lab Exercise** solution within two weeks of submitting it to *Moodle*.

Programming Projects

Students are required to **SUBMIT** the source code for their Programming Projects to *Moodle*. The instructor will compile and test the program outside of class. The student receives a grade for the project based on the ***Grading Criteria*** that is part of each Project Assignment Document.

What is the difference between a Lab Exercise and a Programming Project?
1. **Labs** are demonstrated and discussed during class, but **Projects** are tasks that each student must complete ***on their own***. Projects *may* also be discussed during class, if a student has a question about the project requirements. However, a student's actual solution for a project must **never** be shared with classmates.
2. Each **Project** is generally longer than any one **Lab**.
3. There are three **Projects** during the course, but there are many more **Labs**.

Deadlines

A project or lab exercise not **SUBMITTED** to *Moodle* by the due date specified in the assignment document is subject to a 1% grade penalty for *each day* the assignment remains outstanding, up to a maximum late penalty of 20%. Any assignment that is late by **21 days** or longer will receive a grade of **ZERO**.

If a student never actually completes the *Moodle* submission process, then the assignment will receive a grade of **ZERO**. That is, if the *Moodle* status for an assignment is

Draft (not submitted)

then the assignment will receive a grade of **ZERO**.

Students who are ill or who face a critical problem may have this late penalty waived if the illness or problem can be substantiated. Each case will be decided on an individual basis.

Use of Artificial Intelligence Software is NOT Allowed

In alignment with our Institutional Learning Outcomes, one of the main goals of coming to college is to develop your critical reading, writing, and thinking skills. That means that the student is the one who must do the reading, writing, and thinking in order to benefit from the effort. The use of generative AI, even in the idea creation stage, can result in students skipping important steps in the thinking and creating process, thus undermining their own learning. You are expected to complete each assignment without substantive assistance from others, including **artificial intelligence** (AI) tools such as ChatGPT, CoPilot, Dall-E, MidJourney, etc. Any work written, developed, created, or inspired by AI will **not** be given credit. Any *suspected* use of AI is subject to the **BHCC** policy regarding **Academic Dishonesty**. (Refer also to the **Appendix** section at the end of this syllabus.)

10. Tentative Class Schedule (Subject to Modification)

Class	Topics	Assignment(s)
1. Wed, Sept 3	Scope and Requirements of the Course. Simple examples of Java Programs. Programming Style. The "GraderThan" Integrated Development Environment. ***Intro to Object-Oriented Programming Concepts:*** Real-world objects: state and behavior. Software objects: fields, methods.	Read Ch 1, 2 (pages 1 – 76)
2. Mon, Sept 8	***Chapter 2: Elementary Programming:*** Console input/output. Assignment Statements and Expressions. Named Constants. Numeric Data Types and Operatons. Numeric Type Conversions.	
3. Wed, Sept 10	***Chapter 3: Selections:*** The **`boolean`** Data Type. `if` and `if-else` statements. Logical Operators. `switch` Statements. Conditional Expressions. Operator Precedence and Associativity.	Read Ch 3 (pages 77 – 120)
4. Mon, Sept 15	**Quiz 1.** ***Chapter 4: Mathematical Functions, Characters and Strings:*** Common Mathematical Functions Character Data Type and Operations The String Type Formatting Console Output	Read Ch 4 (pages 121 – 158)
5. Wed, Sept 17	***Chapter 5: Loops:*** The `while` Loop. The `do-while` Loop. The `for` Loop Choosing the best loop type. Nested Loops. ***Introduction to error handling:*** Validating user input. Handling Runtime Exceptions	Read Ch 5 (pages 159 – 204)

Class	Topics	Assignment(s)
6. Mon, Sept 22	***Chapter 6: Methods:*** Defining a Method. Calling a Method. Passing Arguments by Value. Overloading Methods. The Scope of Variables. Method Abstraction and Stepwise Refinement. The **Command-loop** standard program structure.	Read Ch. 6 (pages 205 – 249)
7. Wed, Sept 24	***Chapter 7: Single-Dimensional Arrays:*** Array Basics. Copying Arrays. Passing Arrays to Methods (pass-by-sharing) Searching, Sorting Arrays. The `Arrays` Class.	Read Ch. 7, 8 (pages 249- 322)
8. Mon, Sept 29	***Chapter 8: Multidimensional Arrays*:** Two-Dimensional Array Basics. Processing Two-Dimensional Arrays. Passing Two-Dimensional Arrays to Methods. Multidimensional Arrays.	
9. Wed, Oct 1	**Quiz 2.** ***Chapter 9: Objects and Classes:*** Defining Classes for Objects. Constructors. Reference Variables. Using Classes from the Java Library. Static Variables, Constants, and Methods. Visibility Modifiers. Data Field Encapsulation. Passing Objects to Methods. Array of Objects. Immutable Objects and Classes. The Scope of Variables. **UML** Class Diagrams. **UML** Object Diagrams.	Read Ch. 9 (pages 323 – 366).
10. Mon, Oct 6	***Chapter 10: Object-Oriented Thinking*:** Class Abstraction and Encapsulation. Class Relationships: The String, StringBuilder, StringBuffer classes. Wrapper Classes. **UML**: Associations, Aggregation, Composition.	Read Ch. 10 (pages 367 – 410). **Programming Project One Due.**
11. Wed, Oct 8	***Chapter 11: Inheritance and Polymorphism:*** Superclasses and Subclasses. The `super` Keyword. Method Overriding, Overloading. The `Object.toString()` Method. **UML**: Inheritance, Visibility	Read Ch. 11 (pages 411 - 452)

Class	Topics	Assignment(s)
12. Wed, Oct 15	***Chapter 11: Inheritance and Polymorphism (continued)*:** Polymorphism. Dynamic Binding. Casting Objects. The `Object.equals()` Method. The `ArrayList` Class. The `protected` Access Modifier.	
13. Mon, Oct 20	**Quiz 3.** ***Chapter 12: Exception Handling and Text I/O:*** Exceptions-Handling Overview. Exception Types. Throwing Exceptions. Catching Exceptions. The `finally` Clause. When to Use Exceptions. Rethrowing Exception. Chained Exceptions. Defining Custom Exception Classes.	Read Ch. 12 (pages 453 - 498)
14. Wed, Oct 22	***Chapter 12: Exception Handling and Text I/O (continued):*** The `File` Class. File Input and Output. File Dialogs. Reading Data from the Web.	
15. Mon, Oct 27	***Chapter 13: Abstract Classes and Interfaces:*** Abstract Classes. Interfaces. The `Comparable` Interface. The `Cloneable` Interface. Interfaces vs. Abstract Classes.	Read Ch. 13 (pages 499 - 540)
16. Wed, Oct 29	***Chapter 14: JavaFX Basics*** JavaFX vs. Swing and AWT. The Basic Structure of a JavaFX Program. Panes, UI Controls, and Shapes Property Binding Common Properties and Methods for Nodes The Color Class The Font Class Layout Panes	Read Ch 14 (pages 541 – 592). **Programming Project Two Due.**

Class	Topics	Assignment(s)
17. Mon, Nov 3	***Chapter 15: Event-Driven Programming, Animations:*** Introduction to events and event handling. Events and Event Sources. Registering Handlers Handling Events. Inner Classes. Anonymous Class Listeners.	Read Ch 15 (pages 593 – 642).
18. Wed, Nov 5	***Chapter 15: Event-Driven Programming, Animations (continued):*** Mouse Events. Listener Interface Adapters. Key Events. Animation.	
19. Mon, Nov 10	**Quiz 4.** ***Chapter 16: JavaFX UI Controls and Multimedia:*** CheckBox, RadioButton, TextField, TextArea.	Read Ch 16 (pages 643 – 690).
20. Wed, Nov 12	***Chapter 16: JavaFX UI Controls and Multimedia (continued):*** Combo Box, ListView, ScrollBar, Slider.	
21. Mon, Nov 17	***Chapter 17: Binary I/O:*** How is Text I/O Handled in Java? Text I/O vs. Binary I/O. **InputStream** and **OutputStream** Classes.	Read Ch 17 (pages 691 – 718).
22. Wed, Nov 19	***Chapter 17: Binary I/O (continued):*** Object I/O. Random-Access Files.	
23. Mon, Nov 24	***Chapter 18: Recursion****:* Basics of Recusrion. Examples of Recusion. Recursion vs. Iteration. Tail Recursion vs. Midpoint Recursion.	Read Ch 18 (pages 719 – 750).
24. Wed, Nov 26	**Quiz 5.** ***Chapter 19: Generics****:* Motivations and Benefits. Defining Generic Classes and Interfaces. Generic Methods. Raw Types and Backward Compatibility. Erasure and Restrictions on Generics.	Read Ch 19 (pages 751 – 774).
25. Mon, Dec 1	***Chapter 20: Lists, Stacks, Queues, Priority Queues:*** Collections, Iterators, Lists. The `Comparator` Interface. The `Vector` and `Stack` Classes. Queues and Priority Queues	Read Ch 20 (pages 775 – 814).

Class	Topics	Assignment(s)
26. Wed, Dec 3	***Representations of Numbers:*** Abstract concept of a "number". Representation as a sequence of symbols. Positional Notation. Operations to manipulate numbers. Internal (hardware) representation of integers. Negative Integers.	
27. Mon, Dec 8	***Introduction to Bitwise Operations.*** Concept of Simple Logic Circuits: NOT, AND, OR, Exclusive-OR. Examples of Bitwise operations in Java. Techniques for manipulating individual bits or groups of bits.	**Programming Project Three Due.**
28. Wed, Dec 10	*To be announced*	
29. Mon, Dec 15	*To be announced*	

11. Attendance Policy

Students are **required** to attend each class in order to obtain the maximum benefit from the course. If you must miss class, please notify the instructor by e-mail of the reason. Preferably this should be before class, but if that is not possible, afterward. Students who are late for class will not receive full credit for attendance. Repeated, unjustified absence or lateness will adversely affect your grade.

Roll Call Process

Attendance will be taken at the beginning of each class session, by means of a *voice roll call*. Students are required to respond by a *voice response*. At the end of the voice roll call, students are given another chance to state their presence by voice (in case they arrived after the roll call began). Any student who has stated their presence by this point is considered to be ON TIME.

Any student who arrives at class **after** attendance has been taken is considered to be LATE, and will not be given full credit for attendance on that day. If you arrive at class after attendance has been taken, it is your responsibility to **speak** with the instructor ***after class***, to be sure your attendance has been recorded. Do not disrupt the class by loudly announcing your late arrival. (Using the *Webex* "chat" to communicate your late arrival is **not** sufficient: you must **speak** with the instructor.)

After the **lecture** portion of the class is complete, students are asked if anyone arrived **after** attendance was taken. These students are considered to be LATE, and will not be given full credit for attendance on that day.

Any student who does not comply with this attendance policy will be considered to be ABSENT, and will not be given credit for attendance on that day. The instructor maintains a record of daily attendance, lateness, and absence. This data contributes a small amount to the student's overall course grade.

Special Note for remote classes: Do **not** assume that simply typing a message in the *Webex* "chat" is a sufficient record of your presence, *unless* the instructor acknowledges that your presence has been recorded. Online *Webex* meeting records are **not** considered evidence of attendance.

Students who miss class due to illness or other emergencies must let the instructor know as soon as possible, and should contact the instructor IMMEDIATELY upon their return to assess their status and identify any handouts or assignments which they missed. It is each student's responsibility to keep pace with the class, regardless of any absence.

12. Student Assistance for Online Technology

If you need assistance obtaining any of the technology resources for the course, contact the **Academic Innovation & Distance Education** office: https://www.bhcc.edu/aide/forstudents

Other useful information can be found at: https://www.bhcc.edu/currentstudents/technologyresources/

The BHCC "Help Desk" is: helpdesk@bhcc.edu Telephone: 617-228-3441

13. Disability Support Services

The Disability Support Services Office is a student-focused department dedicated to assisting members of the BHCC community with documented disabilities. Students may be eligible for services that include testing and classroom accommodation. For more information or to request an accommodation, contact the Disability Support Services Office at disabilitysupport@bhcc.edu *or 617-228-2327. Students are encouraged to request accommodations as early as possible, ideally before the start of the semester. For information about programs and services please visit* https://www.bhcc.edu/disabilitysupportservices/

14. Professional Behavior

You are reminded that the college expects each student to exhibit the virtues of honesty and integrity. Students who violate this policy by submitting the work of another as their own or who collaborate on examinations or programming projects will receive no credit for the project or examination and will be referred to the Dean of Students for possible additional disciplinary action.

Do NOT let any other student see your Programming Project code!

This policy is so **important** that it bears repeating:

> The programs that you submit for your programming projects must be **your *own* work**.
> You may NOT submit code that you obtained from some other person, or code that you downloaded from the Internet.
> Also, you may NOT assist any other student to cheat in this way.

The use of **any** Artificial Intelligence (AI) software is **not** allowed. (See also **Section 9** of this document.)

If you are caught cheating on a Programming Project, you will receive a grade of ZERO for the assignment, and you will be referred to the **Dean of Students** for further disciplinary action.

If you need assistance on a Programming Project, ask the instructor!

This policy is consistent with the overall policy of the College. Refer to the **Appendix** of this document for a summary of activities that BHCC specifically prohibits.

Appendix: Excerpts from BHCC Student Handbook

The following table contains two excerpts from the **"Code of Conduct Charges"** section of the BHCC Student Handbook. These are some of the activities that are prohibited.
(See also https://www.bhcc.edu/handbook/behaviorpolicies/.)

Academic Dishonesty. Acts of academic dishonesty, including but not limited to the following:

a. **Cheating**. Intentional use, and/or attempted use of any unauthorized assistance in any academic exercise including dependence upon the aid of sources beyond those authorized by the instructor.
b. **Fabrication**. Intentional and unauthorized falsification and/or invention or any information or citation in any academic exercise.
c. **Unauthorized collaboration**. Deliberately submitting work prepared collaboratively with someone else without explicit permission from the instructor.
d. **Facilitating dishonesty**. Knowingly helping or attempting to help another commit an act of academic dishonesty, including students who substitute for other persons in examinations or represent, as their own, papers, reports, projects, or the academic works of others.
e. **Plagiarism**. Knowingly representing the words, ideas, or artistic expression of another as one's own work in any academic exercise, including but not limited to submitting previously-submitted assignments for which the student has earned credit, copying or purchasing other's work, patchworking source material and representing the work as one's own, or arranging for others to do work under a false name.
f. **Submitting, in whole or in part, prewritten term papers of another or the research of another**, including but not limited to commercial vendors who sell or distribute such material.
g. **Theft of materials**. The acquisition, without permission, of tests or other academic material belonging to a member of the faculty or staff, or another student.

Unauthorized Recording and Dissemination.

Use of electronic or other devices to create and/or disseminate an unauthorized audio or video recording of any person(s) without the person's prior knowledge or without the person's effective consent due to intoxication, drug use, mental impairment or other conditions that may impair a person's ability to convey effective consent. This includes, but is not limited to, surreptitiously taking pictures of another person in a locker room or restroom and recording classroom or administrative activities without the person's consent.
